Avon Pulls Plug On **\$125 Million** SAP Project

Avon halts its global rollout of an SAP order management system after a Canadian pilot project prompts reps to quit in frustration.

Avon has halted the global rollout of an SAP-based order management system after a failed deployment in Canada, [The Wall Street Journal reported](#) late Wednesday.

“Avon halts its global rollout... after a Canadian pilot project prompts reps to quit in frustration.”

Bad UX is often accidental

Good UX is rarely accidental

When UX is bad

you can usually trace the reasons to disrespect or negligence of *design principles*

Good and bad UX case studies

- Business app in WPF that shows what's possible with modern UI
- Corporate app that is too complex and hard to use
 - with ideas for improvement
- Good and bad aspects of various versions of Windows
- Variety of mistakes found in web apps
 - Marriott
 - Amazon
 - Xfinity
 - Etc.

Design evolves to finished product

- Example: Fuel management package
 - Manage delivery and billing for propane and fuel oil
- Prototype broke free of the past
- Finished product then refined beyond prototype

Comments

Why was this done? Requirements:

- Every user must have access to every application function
- Any operation might involve talking to any person in the company

Design principles violated

- Progressive disclosure – layers of information
 - Must choose a person to get any detail besides name
 - Person detail screen obscured main screen when present
- Hick's Law – Too many options slows down the user
- Performance load – too many steps in work flow

Some ideas to deal with Hick's Law (too many options)

- Favorites
- Recently used list
- A filter to find items
- Role-based menus
- Configurable menus – let the user create their own
- Make available actions context dependent
- Frequently used list
- Windows 10 style search
- Reorganize with wizard
- Voice commands
- Predictive menus
- Hotkeys and shortcuts

Several rounds of redesign were rejected by users

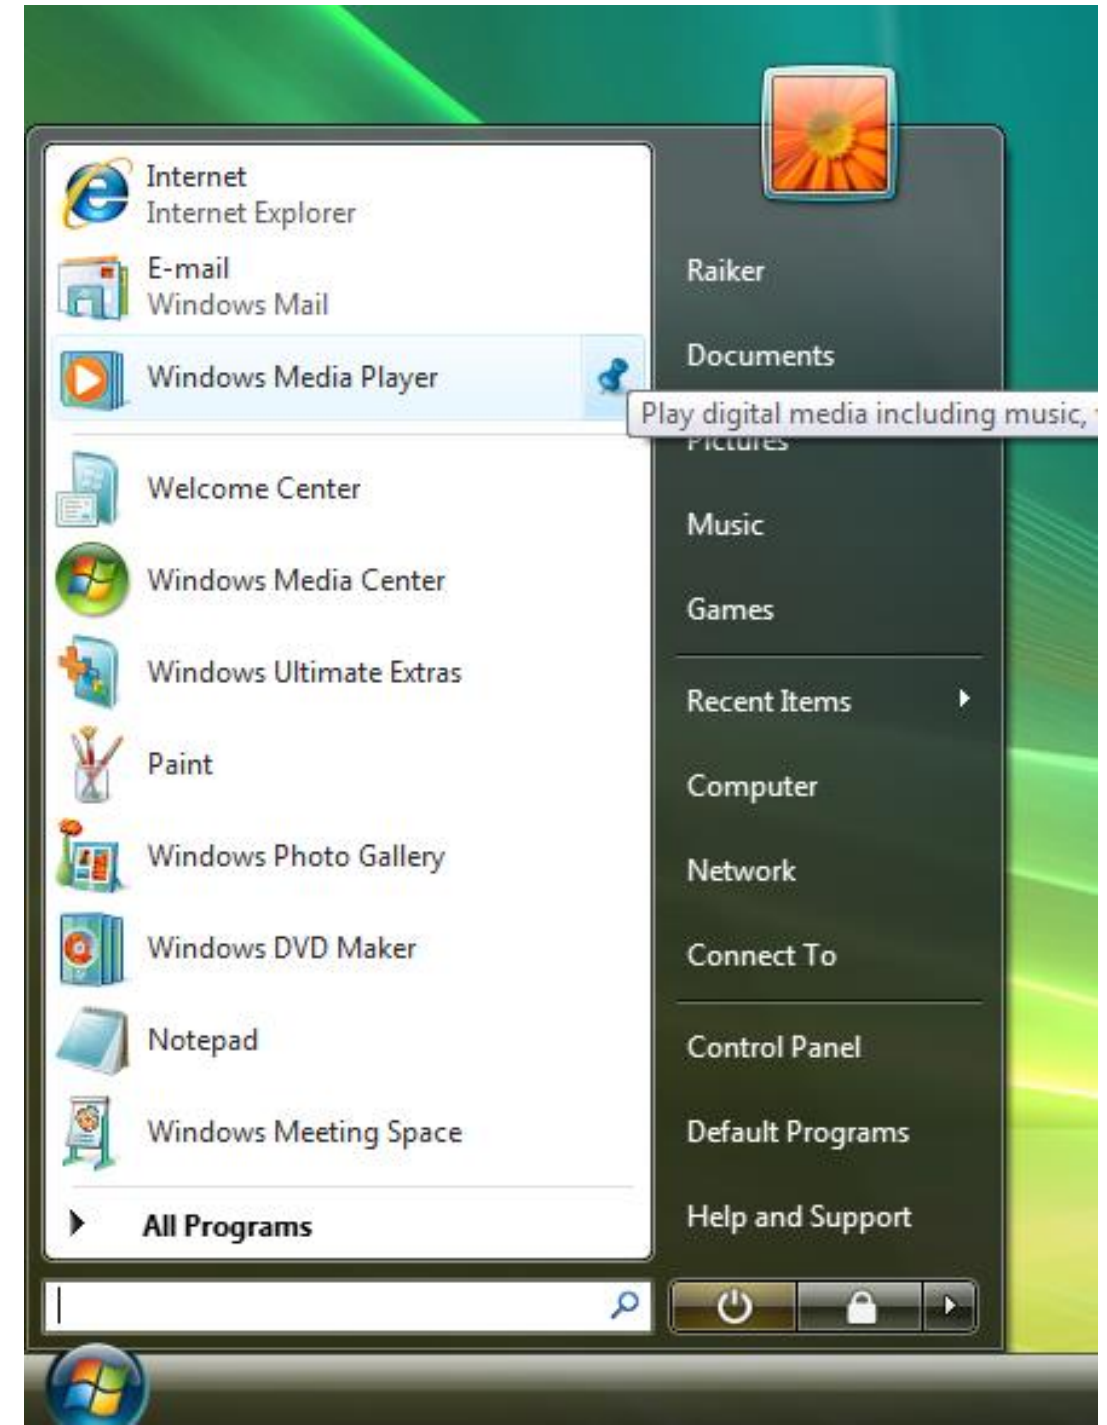

- Windows Forms version circa 2005
- WPF first attempt circa 2010
- WPF second attempt circa 2011-2012

All of these failed in adoption because they didn't address the core design problems – they were reshuffling and cosmetic improvement only

Demo – A prototype with some design options to attack
“Hick’s Law” problems

Windows 7 Start button

- A case study in attacking Hick's Law
- Implements:
 - Favorites (pinned items)
 - Most frequently used
 - Most recently used
 - Search filter
- Also provides *entry point*

And then there was Windows 8...

The image is a screenshot of a web browser window. The address bar shows the URL `nngroup.com/articles/windows-8-disappointing-usability`. The browser's tab bar has two tabs: 'jacob nielsen windows 8 - B' and 'Windows 8 — Disappoi'. The browser's toolbar includes back, forward, refresh, and search icons. Below the toolbar, there are several bookmarks: 'New Tab', 'Instapundit', 'QandO', 'Ace', 'Youtube', 'Common', 'Watchlist', 'Fall 2015', 'Early 2016', and 'Spring 2016'. The main content area of the browser displays the Nielsen Norman Group logo and navigation menu. The article title is 'Windows 8 — Disappointing Usability for Both Novice and Power Users' by Jakob Nielsen, dated November 19, 2012. The article topics are 'Mobile & Tablet' and 'Technology'. A summary is provided in red text.

Windows 8 — Disappointing Usability for Both Novice and Power Users

by **JAKOB NIELSEN** on November 19, 2012
Topics: [Mobile & Tablet](#) [Technology](#)

Summary: Hidden features, reduced discoverability, cognitive overhead from dual environments, and reduced power from a single-window UI and low information density. Too bad.

Windows 8 was a failure, but...

... it was a *preventable* failure

I'M MR.MEESEEK

LOOK AT ME!

Apps by name ▾

Windows 8 Start screen showing a grid of application tiles. The tiles are organized into columns labeled with letters: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R. Each tile contains an icon and the application name. Some tiles have a 'NEW' badge. A search bar is located in the top right corner, highlighted by an orange oval.

Design principles violated

- Hick's Law
- Poor use of animation (live tiles)
 - “Look at me!”
- Lack of visibility – no visible entry point
- Poor use of color
 - Colors too bright
 - Colors not meaningful
- Contour bias

Contour bias

- Curved things are perceived as safe; sharp things are perceived as dangerous
 - Where the word “edgy” comes from
- For long term use, people general prefer curved over sharp

Context in design

Good design is transparent

- Users often don't even notice a good design – they just use it
- If a design is trying to call attention to itself, it probably isn't a very good design
 - Windows 8 was guilty of this
- Don't allow your own designs to scream “Look at me! I'm a cool design!”

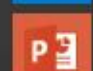

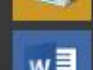

Design is a discipline

- Takes three to five years to get really good at it
- Windows 8 was designed in 2010-2011
- Windows 10 was designed in 2013-2014, and is much improved

More ways to play. Join us!

 Ask me anything  

Takes good concepts from Windows 7 Start button – and adds some

- Voice commands
- Searching (via the Cortana bar) is much better – goes to deeper into the Control Panel, for example
- Tiles give ability to use Fitt's Law to resize according to your usage/priority

Windows 10 still needs work

- “Where do I click to drag?” in Explorer
- It’s hard than it should be to use buttons in Edge
- Colors and sharp edges still need work

But some Windows 10 apps
are well done

- Example: Photo view/edit
- It's basically a lightweight LightRoom, easy enough for anyone to use
- Probably inspired by Instagram

A gallery of web app mistakes

- Even major companies often make design mistakes on their sites
- Here are examples from Amazon, American Airlines, Marriott, and others

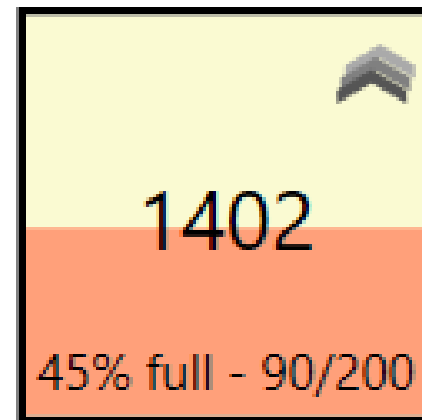

Getting to good UX

- Understanding the problem
 - Which means understanding the business domain
- Knowing what users use/need/want
- Exploration of ideas via sketching/storyboarding/wireframing
- Prototyping to test interaction

What do users really use or need?

- “What three things do you do most often with the existing software?”
- “What one thing needs to be added?”
- “What one thing needs to be changed or fixed?”

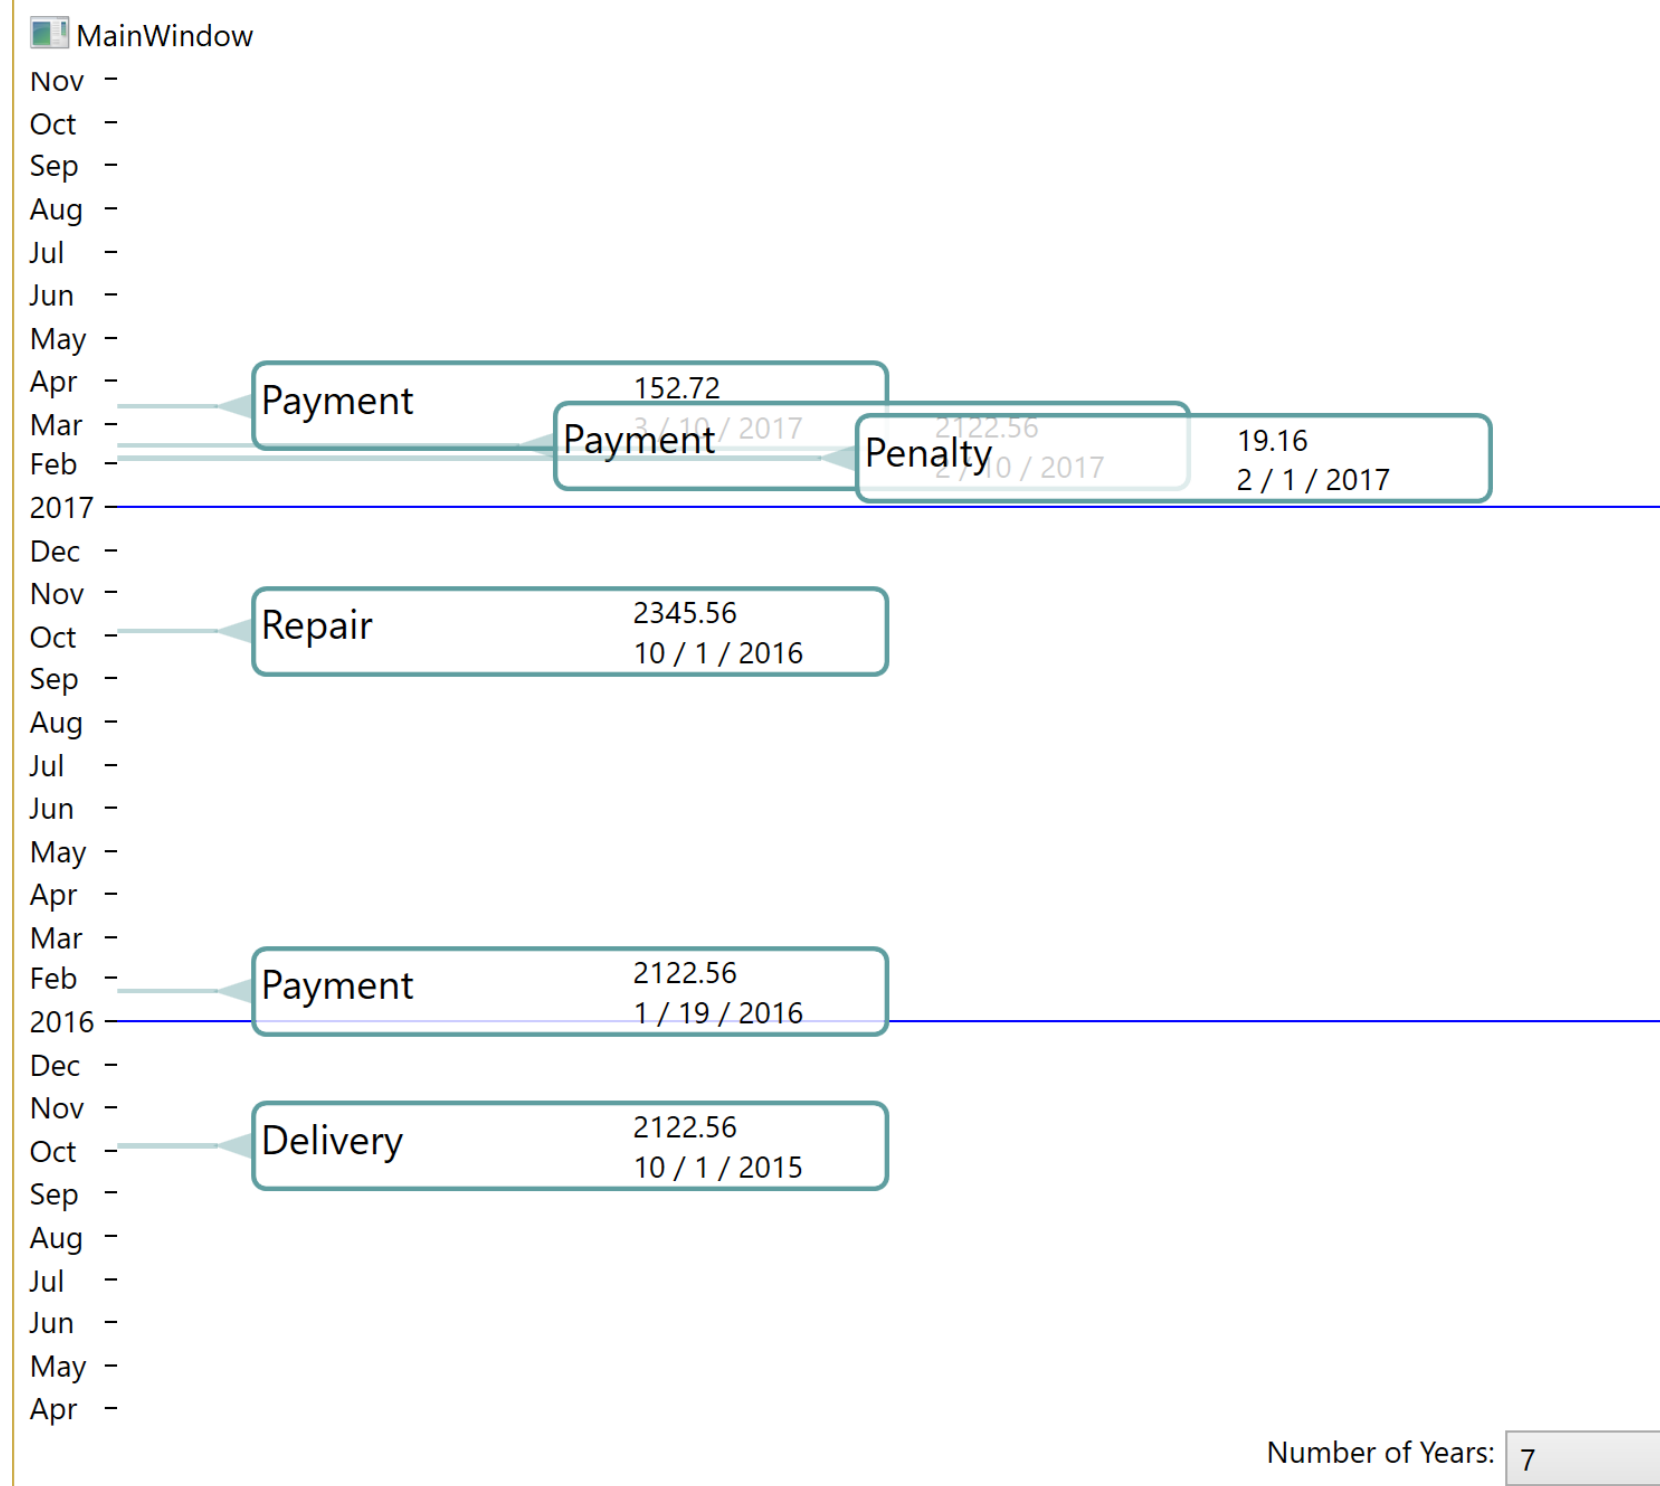

As easy place to have immediate impact on UX – data visualization

Session at 3:00 this afternoon has a section on this

Exposing time-based data via a timeline

Event	Type of event	Date of event	Amount
Payment	Payment	3/10/2017	\$152.72
Payment	Payment	2/10/2017	\$2,122.56
Penalty	Charge	2/1/2017	\$19.16
Repair	Charge	10/1/2016	\$2,345.56
Payment	Payment	1/19/2016	\$2,122.56
Delivery	Charge	10/1/2015	\$2,122.56
Payment	Payment	1/10/2015	\$1,934.56
New Installation	Charge	10/1/2014	\$1,934.56

Collect examples of good and bad UX

- What are the web sites you really don't like? Why don't you like them?
- What apps do you use and they work so well you almost never think about how they work?
- What good and bad designs do you see in the real world?

Assignment

After this session, write down one thing you are going to do because of something you saw in this session. Put a date by which you intend to do it.

If you like, you can email it to me (billyhollis@live.com). That will make it more real to you, and make you more likely to do it.

- User interface design, prototyping, and construction
- Training on user experience design
- Training on XAML
 - Windows 10 / WPF / mobile / touch
 - Beginning through advanced
